EDUCATION

Columbia University, Fu Foundation School of Engineering and Applied Science May 2028

C.P. Davis Scholar, Columbia University Scholars Program

Bachelors of Science - Computer Engineering

Relevant Coursework: Advanced Programming (C Programming), Data Structures and Algorithms, Signal & Systems, Circuit Analysis, Fundamentals of Computer Systems

SKILLS

Computer: Python, Java, C, MATLAB, Assembly

Tools: AWS (Lambda, DynamoDB, S3), Microsoft Office

Business: Grant Writing, Executive Leadership, Human Resources, Strategic Planning

Other: Circuit & Logic Design, Soldering

PROFESSIONAL EXPERIENCE

Amazon Inc.

Software Development Engineer Intern Summer 2025, Summer 2026 (Expected)

- Contributed to the migration of a critical internal service to a new backend system ahead of deprecation deadlines, improving maintainability and long-term scalability.
- Wrote unit and integration tests in JUnit, ensuring over 90% test coverage and contributing to a more stable codebase.
- Utilized AWS services such as Lambda, DynamoDB, and S3 for backend data handling and storage.

Mississippi School for Mathematics and Science

Assistant Camp Director, Summer Enrichment Camp Summer 2024, Summer 2026(Expected)

- Assisted in planning and running daily camp activities for 100 campers, ensuring a safe and engaging environment.
- Supervised and mentored junior counselors, helping develop leadership and teamwork skills among staff.
- Coordinated logistics for events and programs, including scheduling, supplies, and camper engagement.

Southwest Mississippi for Innovation and Leadership in Education

Founder & Executive Director December 2025- Present

- Founded and currently leads a nonprofit empowering high school students in Southwest Mississippi through STEM education and career exploration.
- Designing programs focused on hands-on learning, mentorship, and college readiness.
- Developing partnerships and resources to support student success and foster leadership and community engagement.

ENGINEERING PROJECTS

Arduino Arcade System (Team Project) May 2025

- Collaborated to design and build a functional arcade system using Arduino and C++, integrating 3D-printed buttons and joystick inputs, including soldering and wiring hardware components.
- Developed multiple retro-style games in Python with responsive input handling.
- Combined hardware and software to create an interactive embedded system.
